

Performance Only Bonded Permits

Applies to Major Infrastructure permits for Street Lights (SEC6), Traffic Signals (SEC7) and Site Disturbance permits (SEC8, when upstream of a body of water). All permitted work items must be completed by the “Completion Date” as indicated on the printed permit. In order for the permit to be closed out all disturbed areas shall have fully established vegetation in accordance with KCMO/APWA Section 2400.

For Site Disturbance permits, the performance bond is provided to insure that the erosion control devices are installed per plan and are maintained in accordance with City Standards. Failure to install or maintain erosion control devices will result in enforcement actions, including contacting the bonding company to complete the installation or maintenance activities.

Once all construction activities and operational testing associated with the permit have been completed and have a decision of “FIELD ACC”, the final acceptance letter will be sent to the Permittee and the bond will be released, releasing the Permittee of their obligation. Note, the typical final sign-off decision of “FIELD ACC” stands for “Permit Field Activity Completed” and does not signify permit acceptance.

For Major Infrastructure permits in this category, once released, the improvements will be added to the City’s ongoing maintenance program as a City Asset.
